

Sellenis

Keep your ink jet printers working reliably and Save Money!

Let the Ink Jet insiders supply you with your high quality nozzles for use with **Hitachi® RX** ink jet printers

- Durability and robustness
- Easy unclogging, cleaning and maintenance
- Consistent performance and print quality over time
- Proven nozzle assembly and manufacturing techniques
- Easy to remove, clean and replace
- Long life... No nozzle wear
- The Sellenis guarantee

Durability and Robustness

At Sellenis, your nozzles are made out of sapphire jewel, one of the hardest materials available on the planet (8 times harder than a nozzle orifice made out of stainless steel). This makes your nozzles from Sellenis extremely durable, robust and very tolerant and resilient to all standard industrial handling and use.

Easy cleaning and maintenance

The nozzle can be cleaned by simply spraying it with solvent. To unclog and unblock a nozzle, simply drop it, in any orientation, in an ultrasonic bath for as little time as desired or left in the bath for much longer times without fear of damaging the orifice or reducing the performance of the nozzle in any way

Ease of use, consistent performance and long life

The nozzle is easy and quick to remove and replace. No tweezers or other special tool necessary. It will not scratch, it will not wear, jet start up and straightness will not degrade, and the print quality and reliability of the nozzle will stay consistent month after month, year after year whether you are using standard or pigment based inks guaranteed.

Proven manufacturing technique

The method of assembling the jewel orifice to the nozzle plate has been proven in industrial applications since the early 1990's across multiple ink jet printers in applications around the world.
